You can create a list of files, folders, or devices and then decide what action to perform on them: copy, move, copy, or delete files."1. Field of the Invention The present invention generally relates to a database management system and, more particularly, to a data base management system having a capability for reliable and error free recovery. 2. Description of the Prior Art Database management systems have long been used to provide a mechanism for storing and accessing data in a database. In the past, the predominant method of accessing a database in a data base management system was through application programs which communicate with the database through application program interfaces. This method has a disadvantage in that each application program would have to interface with the database directly. A significant advancement in the art of data base management systems was the development of what is known as a native data base interface, which allows access to a data base from within the data base management system. Through such an interface, a user of the data base management system is able to access the data base without the need for an application program to be loaded and executed on the user's workstation. A very popular native data base interface is known as ODBC (Open DataBase Connectivity), which defines a standard for the easy, direct access of an application program to a database. This native data base interface has significant advantages over the prior methods of communicating with databases. For example, the native data base interface allows the user of the database to access the database by using a common user interface. The user of the data base management system can manipulate data through a familiar SQL (Structured Query Language) user interface which may be provided by the data base management system itself. This user interface is composed of a number of database objects, such as tables, views, and SQL queries. The SQL queries, in turn, are the interface to the database. An additional advantage to this native data base interface is that application programs
