The Music Player allows you to browse and play your music files right from the Windows Explorer (it is a file explorer, and a bit like Windows Media Player). It can play WAV, WMA, MP3, MPEG, AVI, AVI, WAV, MIDI and CD audio files. It can also play Internet radio streams with WMA or MP3 audio. As the name implies, this tool will allow you to enjoy and manage your MP3 files in your Windows 8.1 machine. It supports drag and drop, search in playlists, save playlists as a sequence and more. Not only will you be able to play your MP3 files, but you'll also be able to create, import and manage playlists, which makes this app the easiest way to listen to your music on Windows 8.1. With Music Player, you can:

- Play MP3s** You can easily play your music files on this app. All you need is to drag a file from the Windows 8.1 computer to Music Player. You can either insert the file into the app manually, or use the search function in the app.
- Playlists** With this feature, you can add your favorite songs to a playlist and open that playlist from the app. You can even use the slider to control how the music will play.
- Search** You can easily search for your favorite songs by using the search function in the app. You can find any song easily with the search bar in the app.
- Create a sequence** Music Player allows you to create a playlist, which makes it a good tool to manage your music in one place. With a playlist, you can listen to a song without having to open the app each time.
- Import songs from other apps** This app allows you to import songs from other apps. You can even import songs from Dropbox and other cloud-based storage services.
- Edit metadata** With this tool, you can easily change the title, album name and other metadata for your songs. This feature is very useful if you want to organize your music.

Now that you've found a great tool to manage and play your music in Windows 8.1, don't forget to rate the app. With the introduction of Windows 10, Microsoft has adopted a new look for the OS that uses a Fluent design. Unfortunately, this means that the traditional Start menu and Taskbar are no longer available. However, you can use the native Windows 10 bar on

MCI-Browser is a file explorer which plays most audio files and even some video files. You can move files and create new folders. You can even listen to tracks by dragging them to the media player. MCI-Browser has a simple interface with four volume faders (Local, Master, Wave and Midi). Also, you can modify the track's speed (which is equivalent to a pitch fader). You can also check the overlap option if you want a bit of crossfade between the songs that you are listening to. Other features: - Horizontal fader to modify the track's speed. - Automatically increases the volume of the song played at startup. - Shuffle the files. - Search the content of your files.

Description: kalibri is a beautiful windows app for Spotify that let you listen to Spotify on your desktop. It's not a simple media player, it has lots of features and it's compatible with Spotify and other music streaming services, even if you have to unistall the app from your phone. It's compatible with Linux, macOS and Windows. The interface is simple and clear. You can select any track and play it from the app. There's a vertical bar in the center that helps you to navigate between the tracks, the playlists or the other sections of the app. You can have as many windows open as you want. When you're listening to a playlist, you can change the play order and the shuffle your playlist as well. You can also make a copy of a playlist, so you can listen to your library just by playing the songs from that playlist. You can set a song as a favourite, and then it will appear on the favourites bar. The app comes with a portable version too. A bonus feature is the ability to listen to music without Spotify; you just have to launch the app and choose your music library and you'll be able to play your favourite songs. Another feature worth mentioning is that if you have a Spotify Premium account you can have all your playlists synchronized with your desktop. You can also create your own playlists, import your YouTube playlist or playlist from the web, or drag and drop a file to import it. You can play any format of audio file you want, even ones that were created with other music software like Cubase or Logic. You can also play FLAC, MP3, OGG, MIDI and WAV. Description: Simple, yet powerful and stylish, the good-looking kalibri is a beautiful windows app for Spotify that let you listen to Spotify on your desktop. It's not a simple media player, it has lots of features and
