The monotype is an off-shoot virtual pet that only exists during play. Momotype is a retro, toy-like game designed as a mix of Tamagotchi and Animal Crossing. All of the tamogotchi-lite games need nurturing (the player) to keep the miniature animal alive. Momotype, however, is designed differently. The objective of Momotype is to raise a Momotachi and achieve the goal of all the tamogotchi-lite games, which is to have your Momotachi reach level 50. How Momotype Works: Each Momotachi is unique and behaves differently. Momotachi differ in gender, appearance, and musical preferences. Each one of them has needs in order to live. The player must use the momotachi as a "talk" to progress the play-through, learn how to care for them, and learn about the momotachi's secret needs. Throughout each play-through, Momotype changes the other game-play elements. In order to help the momotachi, the player is able to give them gifts to help them live. Some momotachi like music. Others like grass. Others like your heart. The player may use the monotype as a microphone to perform songs to the momotachi. Furthermore, the player can choose to opt-out of using momotachi as a "talk". You are the player's friend and only, but your relationship with the momotachi can change. As the relationship with your momotachi changes, the game can change based on it. Once the momotachi reaches level 50, they will become available as pets. The player can then choose to adopt one of them into their family. MomoType Story After the story, player discovers that Momotachi are living in a world not unlike Alice's Wonderland. The player discovers that this is a game designed by the major publishers of the time. It is a spin-off of Tamagotchi, designed to subvert the main character's power and force them into their miniscule world, to experience what it is like to be trapped. The player must use their heart as a weapon, and fight to get back to their normal life. The player must be a very caring friend, or else, the momotachi will leave them, and they will never be able to find them. Momotachi Level 50 Rewards 1. Each Momotachi is unique, and they each have specific needs

What's new in Blade Crusade:

(The Witcher) "Deep in the Forest" is episode six of the original television series, The Witcher (1997), composed by Sergei Lebedev and based on the fantasy novels of the same name by Andrzej Sapkowski. Plot In the first half of the episode, Geralt is sent by his queen in search of the twelve Skellige Wielders of Arundel, akin to the "Lords" of the British Isles. They are the main focus of the book series, and often seek out herbists in the area to ask for assistance in fighting an uncontrolled wyvern invasion that threatens their lands. The Wielders have gathered to find out the fate of their men stationed in Arundel. In the foreshadowing scenes to this scene, a wyvern hunts and drags away a young boy named Rastfärd. The following scene shows Rastfärd being attacked by a pack of wargs, with several riders trying to save him as he's dragged off by a wyvern. A wild dog chases this event, when Rastfärd's mother finds his body and weeps. She has visions of wolves trying to protect her son, who comes to life and tells her that they will help her son. At an inn, a boy accidentally turns down a room at the inn to a traveler, named Crach mgoile, who is otherwise a mysterious man without any real reason for his travels. Continuation of The Witcher At the court of King Jaskier, the Queen consults with an ancient magus named Hemscall to seek out the truth in a prophecy dream he had with her. In it, he sees that the dream is a warning of the death of their child. Hemscall relays this talk to Jaskier, who, in turn, shares it with his warden, an odd reaction considering he was hardly inclined to treat it as a serious expression of important things. In the next scene, Geralt is tested. The years away from his time in the Nilfgaardian armies have left their marks, so tests are tough. But nothing is too much for Geralt, he's often been called the Best Witcher, despite his lack of experience. Eventually, they come to Arundel, where they encounter a wyvern attack. The men are afraid and their warden gives them cause to flee by

We’re a small team, based in Reading, with a big passion for driving games. We started the company in 2013 and have gone from strength to strength, releasing three games for the PC (All Stars Battle Royale, All Stars Evolution and All Stars Racing) and are now working on a brand new racing game: All Stars Racing Cup. We’re hoping our new game will be released late 2015 or early 2016. For more information about us, you can visit: www.dragostar.co.uk. Here's what the press have said about All Stars Racing so far: - Digital Spy, November 2014 - Popular Mechanics, November 2014 - Digital Trends, November 2014 - GamesTM, December 2014 - Game Informer, December 2014 - Vector Unit, December 2014 Stealth Game Titles, Part II What follows are the descriptions for the stealth games from the article. Stealth Game Titles, Part II - Most Wanted - Thief - The Long Journey Home - Ninja Gaiden III: Razor’s Edge - Hitman: Absolution - Metal Gear Solid V: The Phantom Pain - The Walking Dead In case you missed it, remember that you need a game that is in development in 2013. Q: Change an array that contains multiple json objects inside an object I'm trying to change a JSON file that contains multiple JSON objects inside of an object. I've used JSON.stringify() to convert the JSON file to JSON, but now I need to change it back to a valid JSON file. The original JSON file looks like this: {"titles": [{"title":"title1"}, {"title":"title2"}]} And I would like it to look like this: [{"title":"title1"}, {"title":"title2"}] Is it possible to do this? A: You can check the length of the titles array of your json, if it's 0 or 1, then it's an array, else it's a single object. function convert_to_array(json_text) { var obj = JSON.parse(json_text); if (obj.titles.length == 0) { return json_text; } else {
